

Swing Carriages

Swing Carriage - The load capacity of a lift truck jib has a most of approximately 1935 lbs to 6000 lbs on either the extended or retracted positions range. You may want to consult with a material handling specialist about the particular restrictions of your lift truck application. The load capacity ratings are really meant for the jib itself and not the lift truck or the utmost load which can be transferred securely with a particular forklift. It is important to bear in mind that at any time when whichever attachments such as a lift truck jib are attached to the lift truck, the new center of gravity created by the accessory would decrease the overall lift capability of the forklift. There are guidelines available that provide information on how to properly estimate these load limits.

Before the use of whatever lift truck jib, be sure that the shackles and hooks are correctly secured to the forklift. Be sure and even double check that the pins are tight. It is very important that the load calculations have been properly done and double checked. Bear in mind to take into account the truth that rated capacities sometimes lessen every time the boom is in a raised position, whenever the boom is fully extended with telehandlers or even each time the mast is tilted forward.

Important suggestions each time you are making use of an adjustable jib is not to ever pull a load using this particular sort of attachment. These types of additions are really only meant for vertical raising. Also, refrain from letting the load move back and forth. Utilize extreme caution each time a load is lifted so as to prevent tipping over the truck.
